SUMMARY

Experienced data scientist with 4+ years of experience in government analytics, process automation and data-driven optimization. Pairs an MSc in operations research with day-to-day delivery in SQL, Python and Power BI for policy, finance and HR leadership. Builds and publishes optimization and statistical models in Python and Rust.

EXPERIENCE

Enterprise Project Manager, Human Resource Information Systems (HRIS) Feb 2026 – Present
Government of Yukon, Public Service Commission Whitehorse, YT

- Lead the decommissioning of the SAS reporting platform with full project ownership, replacing its reports with PeopleSoft solutions expected to save about $100K per year.
- Prepared 100+ custom reports in Oracle SQL and SQR for payroll, finance and HR leadership across the Yukon government.
- Manage HRMS business-process and application-support projects, including system enhancements and tax and regulatory updates; write test plans and run user acceptance testing against technical, business and legal requirements.
- Maintain and enhance the HRMS through PeopleTools upgrade projects and develop BI dashboards of internal metrics that support public-policy decisions.

Compensation Analyst, Alternative Payment Program Oct 2024 – Mar 2025
Ministry of Health, British Columbia Vancouver, BC

- Analysed $200M in annual anesthesia contracts across 30 sites, using statistical review of quarterly utilization to identify outliers and data-quality issues.
- Built Power BI data models and dashboards that automated data aggregation from the ministry's scheduling system, cutting scheduling, budgeting and analysis time by 20% each.
- Shortened quarterly forecast modelling by 30% with Excel templates that compare contract utilization with forecasts.
- Reduced lead time on external data requests by 25% by building automated data pipelines with Oracle SQL queries.
- Onboarded 4 new sites, preparing their contracts, budgets and schedules to stakeholder requirements.
- Led workstreams in the program's digital transformation, using data modelling to find and fix process inefficiencies.
- Wrote 10+ briefing notes with cost-benefit analysis and forecasts that supported funding and expansion decisions.

Co-op Level II, Compensation Policy and Programs, HSWBS May 2023 – Apr 2024
Ministry of Health, British Columbia Victoria, BC

- Supported $15M+ in funding decisions with forecast models and cost-benefit analyses for senior leadership.
- Provided quantitative analysis for 15+ policy reports, recommending methods and estimating timelines.
- Shortened contract-utilization and financial reporting time by 20% by streamlining analysis templates and building data-correction tools in Excel and SQL.
- Coordinated development of 3 system sections: led working groups, interviewed stakeholders and analysed system requirements.
- Wrote 8+ training documents on system changes, Power BI reporting and anesthesia-contract forecasting.

Graduate Research and Teaching Assistant Sep 2021 – Apr 2024
Simon Fraser University Burnaby, BC

- Implemented the algorithms FK-A and FK-B with an independent transversal oracle, built diagnostic tools for recursion trees and symmetry groups, and formalized the audited thesis results in Lean 4 with Mathlib.
- Modelled fault-tolerant supplier selection on the USDA Qualified Bidders List as a hypergraph transversal problem, solved exactly by branch and bound; released the solver along with an interactive site (Rust).
- Built exact unit-commitment and pricing models comparing locational marginal, convex-hull and average-incremental-cost prices by the uplift each leaves; on the FERC staff case, convex-hull prices cut uplift from $1,690 to $365 (Rust, HiGHS).

- Formulated electric-vehicle routing with charging stops as an MILP bounded by column generation, certifying four benchmark optima, three shorter than the published values; sized the bus fleet for TransLink Route 100 (219 daily trips) from its GTFS timetable with network-flow models (Rust).
- Computed minimal cut sets of E. coli metabolic networks from their 100,274 elementary modes in exact integer arithmetic and showed that dead subtrees, not repeated states, account for most MMCS search nodes (Rust).

Training Assistant, Office of Antiterrorism Assistance Dec 2020 – Sep 2021
Antiterrorism Assistance Program, U.S. Department of State Dhaka, Bangladesh

- Recruited, trained and managed 4 interpreters for technical counterterrorism training delivered by the Diplomatic Security Service.
- Coordinated communication between DSS trainers, program management and 50 law-enforcement officers across 4 cities on bomb disposal, cybersecurity and tactical response courses.
- Wrote 20+ performance assessments and recommendation letters evaluating officers for advanced training.
- Helped develop and implement tactical documents, including unit standard operating procedures (SOPs).

Business Development Analyst Sep 2019 – Nov 2020
Incepta Pharmaceuticals Ltd Dhaka, Bangladesh

- Analysed price quotations from competing regional and global manufacturers and suppliers of active pharmaceutical ingredients (APIs) and excipients to secure competitive sourcing.
- Tracked product movement and channel distribution in SAP and Excel and produced performance reports for territories.
- Managed key retail and institutional accounts from lead qualification to contract execution, and assessed the feasibility of new B2B ventures with healthcare providers and institutional buyers.

EDUCATION

MSc in Mathematics (Operations Research) Sep 2021 – Dec 2024
Simon Fraser University Burnaby, BC

GPA 3.6/4.0

Thesis: Tracing the Effects of Symmetry in Hypergraphs on the Fredman–Khachiyan Algorithm (senior supervisor: Tamon Stephen)

Courses: Integer Programming, Network Flows, Nonlinear Optimization, Graph Theory, Algebraic Geometry

Awards: GPS Graduate Fellowship, SGE Scholarship

BSc in Mathematics, minor in Film Studies Aug 2015 – May 2019
Washington and Lee University Lexington, VA

GPA 3.3/4.0

Courses: Microeconomics, Macroeconomics, Epistemology, Poverty Studies, Supply Chain Management

Awards: RE Lee International Fellowship, Johnson Research Scholar, Evans Grant

Exchange Semester, Center for International Education, W&L Aug 2018 – Dec 2018
University of Edinburgh Edinburgh, UK

Courses: Ethnography and Culture of Scotland, Financial Mathematics, Honors Differential Equations

TECHNICAL SKILLS

Business intelligence	Power BI, Tableau, SAS, Oracle SQL, SQR, Excel (VBA, Advanced Formulas, Solver)
Programming	Python, Rust, R, MATLAB, JavaScript, Lean 4
Operations research modelling	Gurobi, CPLEX, HiGHS, SCIP, AMPL, Pyomo, PuLP
AI/ML	SciPy, NetworkX, scikit-learn, PyTorch, Matplotlib, Hypergraph-DB, RAG development, automated CI/CD pipelines
