On valid work permit · Willing to relocate

SUMMARY

Data scientist with 3+ years of experience in policy and data analysis and process optimization for governments, and in data modelling and programming for large-scale industrial, supply-chain, logistics and financial problems. Spearheaded a Power BI platform handling $200M in billing while improving efficiency by 20%. Proven record of cross-functional collaboration and actionable reporting solutions that accelerated decisions and efficiency measures.

EXPERIENCE

Compensation Analyst, Alternative Payment Program Oct 2024 – Mar 2025
Ministry of Health, British Columbia Vancouver, BC

- Conducted financial analysis on $200M in annualized anesthesia contracts, identifying outliers and data-quality issues via statistical analysis and quarterly utilization reviews across 30 sites.
- Accelerated contract scheduling and budgeting by 20% by developing Power BI solutions that automated data aggregation from the ministry's internal scheduling system for real-time evaluation.
- Reduced quarterly forecast modelling time by 30% by creating automated and scalable Excel templates for 30 sites that evaluate contract utilization data against forecasts.
- Onboarded 4 new sites by preparing their contracts and creating budgets and schedules according to requirements presented by relevant stakeholders.
- Reduced external data request lead time by 25% by engineering automated data pipelines with custom Oracle SQL queries, streamlining internal data management and ETL processes.
- Cut data analysis time by 20% through advanced data modelling in Power BI, developing predictive dashboards for anesthesia contract utilization and multi-year trend analysis.
- Increased team meeting productivity by 30% by implementing interactive Power BI dashboards that facilitated real-time trend analysis and data-driven stakeholder discussions.
- Led key workstreams in a large-scale digital transformation, using data modelling to identify and resolve legacy system inefficiencies, which modernized the anesthesia compensation program.
- Improved the executive decision-making system by authoring 10+ briefing notes that integrated cost-benefit analysis and forecast modelling, providing data-driven justification for ministerial correspondence.

Co-op Level II, Compensation Policy & Programs, HSWBS May 2023 – Apr 2024
Ministry of Health, British Columbia Victoria, BC

- Supported quantitative analysis on 15+ research and analytical reports by estimating timelines and selecting methodologies to directly inform policy development.
- Supported $15M+ in funding decisions by developing forecast models and conducting cost-benefit analyses for senior leadership, ensuring strategic resource allocation.
- Accelerated contract utilization and financial reporting by 20% by streamlining analysis templates and developing data-correction tools in Excel and SQL.
- Coordinated the development of 3 new system sections by leading working groups, conducting stakeholder interviews and systems analysis with the DevOps team and internal stakeholders.
- Developed 8+ training documents on new system modifications, Power BI reporting, and forecasting processes of anesthesia contracts, enabling seamless user adoption of updated data management systems.

Graduate Research and Teaching Assistant Sep 2021 – Apr 2024
Simon Fraser University Burnaby, BC

- Applied optimization modelling with Gurobi and CPLEX to strengthen optimal bounds for scheduling and routing problems.
- Generated 50+ precise benchmark solutions for operational analysis by modelling exact assignment and production scenarios in AMPL and Python.
- Evaluated transport and distribution scenarios with network flow and LP/MIP models in Pyomo and Gurobi.
- Tightened machine scheduling models by improving branch-and-bound performance and integrating cutting planes in CPLEX.

- Developed 10+ diagnostic frameworks in Python using NetworkX to analyze structural properties of warehouse and logistics networks.
- Trained neural networks for demand forecasting in PyTorch using quasi-Newton optimization methods.
- Adapted 20+ analytical methodologies by synthesizing scientific literature to solve complex assignment, allocation, and routing problems.
- Delivered 15+ technical presentations to diverse audiences of students and peer researchers, effectively communicating complex optimization concepts.

Training Assistant, Office of Antiterrorism Assistance, U.S. Department of State Nov 2020 – Sep 2021

Antiterrorism Assistance Program (ATA) Dhaka, Bangladesh

The ATA program of the Diplomatic Security Service is the U.S. government's principal provider of counterterrorism training and equipment grants to foreign law enforcement.

- Managed a team of 4 interpreters through specialized recruitment and training, ensuring accurate translation of complex technical terminology for counterterrorism programs.
- Facilitated communication for 50 law enforcement officers across 4 cities, enabling advanced training delivery in bomb disposal, cybersecurity, and tactical response.
- Secured critical resource funding for 2 specialized training facilities by facilitating high-level dialogue between U.S. officials and Bangladeshi police leadership.
- Authored 20+ performance assessments and recommendation letters for senior officials, directly evaluating officer readiness for advanced training selection.
- Translated and secured government approval for 6 tactical documents, including Standard Operating Procedures, ensuring official adoption and compliance.

EDUCATION

MSc in Mathematics (Operations Research) Sep 2021 – Dec 2024

Simon Fraser University Burnaby, BC

GPA 3.6/4.0

Thesis: Tracing the Effects of Symmetry in Hypergraphs on the Fredman–Khachiyan Algorithm (senior supervisor: Tamon Stephen)

Courses: Nonlinear Convex Optimization for Continuous Variables, Graph Theory, Network Flows, Linear Programming, Integer Programming, Algebraic Geometry, Commutative Algebra

Awards: GPS Graduate Fellowship, SGE Scholarship

BSc in Mathematics (minor in Film Studies) Aug 2015 – May 2019

Washington and Lee University Lexington, VA

GPA 3.3/4.0

Awards: RE Lee International Fellowship, Johnson Summer Research Scholar, Evans Grant

TECHNICAL SKILLS

Programming and databases	SQL (MySQL, PostgreSQL, Oracle, MS SQL Server, MongoDB), Postman, OpenAPI, GraphQL, AMPL, Python (NetworkX, pandas, SciPy, PuLP, PyTorch), JavaScript
Optimization and mathematics	Gurobi, CPLEX, HiGHS, SCIP, Pyomo, SageMath
Product tools	Jira, Notion, Azure, MS Planner, SharePoint
Analytics	MS Power Platform (Power Automate, Power BI, Excel VBA), Tableau, workflow mapping, journey mapping, storyboarding
